Compact Solar offers an aesthetic alternative to the large standard solar panels. By using small solar panels we can flexibly fill in any flat roof. This way we make optimum use of the available space. Standard solar panels are mainly functional. With Compact Solar you generate solar energy in style. We do not offer you a complicated technical story, but an elegant solution for your home. In the design of our systems we have optimally coordinated all components so that you no longer have to think about this.
